

Teltek **Collator/Aligner** LS100

The TELTEK LS100 takes products delivered in groups across the feeder and delivers a uniform line to downstream systems. The LS100 is designed for rollstock machines and other machines that present products in batches.

The LS100 is unbeatable at handling and organizing products that are difficult to move laterally, e.g. flat products.

In creating the uniform line, the LS100 maintains each individual product's orientation (without turning) on the conveyor. This simplifies the task of downstream machines.

The TELTEK LS100 comes with a stainless steel stand and electronics cabinet, an aluminium conveyor and a Plexiglas safety hood. It is controlled via a PLC system and photocells. Speed is determined by the length of the incoming feed and the number of conveyors. Depending on design, the LS100 can handle a total of up to 60 - 80 products per minute. The LS100 is CE marked and can be supplied with several, easily interchanged conveyor options.

Specifications

Conveyor

Height: 850-950 mm

Total length: 300-600 mm

Total width: 250-500 mm

Dimensions

Length: 300-600 mm

Width: 900-1100 mm

Voltage: 230 VAC

CE-approval: Yes

The dimensions of the collator/aligner is brought in line with customers needs
